

ABSTRACT

“Method for the prognosis and/or diagnosis of a cancer”

BIOMERIEUX S.A. / Centre Léon Bérard

- 5 The present invention relates to a method for the prognosis and/or diagnosis of a cancer using a biological sample taken from a patient, according to which the expression of the twist gene is determined. The invention also relates to the use of at least one inhibitor of twist gene expression for the manufacture of a medicament for combating cancer.
